Trans-Texas Corridor

What is it?

How will it affect trucking?

The Texas Department of Transportation (TxDOT) is planning on building a new super highway system called the Trans-Texas Corridor (TTC). The Trans-Texas Corridor will not be just another interstate and will be used by more than just automobiles. It will include 10 lines for traffic, two high speed rail tracks, four standard rail tracks, utility lines, oil pipelines, and gas pipelines. The Trans-Texas Corridor will cost an estimated 184 billion dollars. The Trans-Texas Corridor will consist of many corridors segments that are 1,200 feet wide, with each mile consuming 146 acres of land.

How will it reduce congestion?

The Trans-Texas Corridor will provide more options to get around, less congestion. The current congestion in cities will be decreased because traffic on the TTC will be routed around major cities. There are many questions about financing, networks, Interstate 69, Mexico and NAFRA. Whether it is a direct or indirect benefit, local communities, citizens and businesses will benefit from the Trans-Texas Corridor.

More information, please contact the TxDOT: www.TxDOT.gov or www.dot.state.tx.us
